Stefania Bertolini, ARPAE-Regional Agency for Environmental and Energy Prevention of Emilia-Romagna, Italy

1 Introduction

Health education plays a key role in prevention teaching people to reduce mosquito development and consequently the health damages and costs resulting from the interventions needed in case of severe infestations.

The project "Contrasto alla Zanzara Tigre":

- was established in 2017
- is **promoted and funded by the Regional Health Service of Emilia-Romagna** with the collaboration of the **Regional Center of Education for Sustainability**, a structure of the **Regional Environmental Protection Agency**
- is put into practice by a network of 43 local Sustainability Education Centers that implement a program in which this project is embedded
- **involves students from 8 to 14 years of age**, community stakeholders (volunteers, families, citizens) and institutions (municipalities and Local Health Authorities).

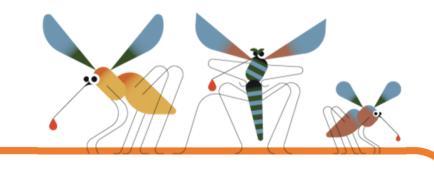

Methods

The project is divided into three formats with differentiated paths and targets:

- **Format 1 School**. A proposal aimed at primary and secondary schools to learn more about the biology of mosquitoes and insects in urban areas, related health risks, and influence of climate change on the introduction of new invasive species. A course also to learn how to take care of a place by adopting good practices to prevent the development of larval outbreaks.
- Format 2 Summer camps. A workshop, declined in the playful-educational context of the summer camps (6-11 years old kids), to learn about mosquitoes, the diseases they can transmit and learn good preventive practices.
- Format 3 Active community against mosquitoes. The pathway involves different actors in the interested area (citizens, families, teachers, school personnel, associations, oratories, institutions...) in concrete actions that can contribute to the prevention of the spread of mosquitoes in sensitive places close to them, such as, for example, a school or a youth center or other gathering centers.

Q The project translated into numbers

From 2019

72

From 2020

3

From 2020

149 schools

183 camps

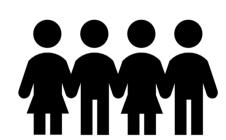

5,124 buildings (DtoD)

11,670 students

3,541 kids

152 public events
